EXPERIENCE

Software Engineer DevOps | Fidelity National Information Services, Inc. | Bangalore, India **June 2021-July 2023**

- Created reusable Terraform modules (Infrastructure-as-code) and Ansible playbooks (Configuration management) to automate provisioning of cloud infrastructure, improving onboarding time for new environments by 60 %.
- Automated deployment of middleware technologies (Tomcat, IIS, JBoss) and monitoring tools (Zabbix, Smart Cloud) using automation tools, maintaining consistency, and improving quality assurance across all environments.
- Monitored and maintained over 200 RHEL and Windows servers across 25+ client environment with 99.9% uptime, handling patching network/firewall configurations, ensuring consistent uptime and optimal performance.
- Supported Azure and on-prem Red Hat-based Kubernetes environments by troubleshooting failed deployments and incidents, image updates, performing rollouts and resolving root causes to ensure minimal service disruption.
- Provided Tier-1/L2 production support across hybrid cloud environments, monitoring system health, handling on-call incidents, and performing root cause analysis using ServiceNow to meet SLA timelines.
- Supported UAT and pre-production releases by validating deployments, reviewing logs, and resolving configuration issues in Agile/Scrum environments to ensure smooth production rollouts.
- Managed source code through Git (GitHub/Bitbucket) and supported release coordination using Azure DevOps Boards in a Scrum-based environment, ensuring structured version control, and streamlined deployments.
- Supported and maintained Jenkins CI/CD pipelines integrated with ServiceNow, troubleshooting failed build stages, updating environment variables and credentials, and resolving deployment issues.

Cloud Engineer Intern | Saayam For All | San Jose, USA

September 2025 – May 2026

- Used Terraform to set up AWS infrastructure such as VPCs, public and private subnets, S3, route tables, NAT/Internet Gateways and EC2 instances to support consistent environment creation.
- Configured secure AWS IAM roles, policies, and security groups using least-privilege principles, while deploying Amazon CloudWatch to track system metrics and establish real-time operational alarms..
- Helped maintain and support CI/CD pipelines, assisting teams with smoother deployments and reducing manual steps in the release process.
- Supported day-to-day cloud operations, troubleshooting deployment issues and improving system performance across AWS environments..

PROJECTS

Auto-Scaling Flask Application with Kubernetes HPA | Kubernetes, GitHub, Prometheus, Flask

- **Challenge & Approach:** Handled traffic spikes by deploying a Flask app on Minikube (Kubernetes) and configuring Kubernetes HPA with Prometheus metrics. Enabled dynamic pod scaling with error handling during load surges.
- **Impact:** Application responsiveness by 2× and improved resource utilization by 40%, gaining hands-on experience with cloud infrastructure automation, cloud technologies and scalable microservice deployment.

Automated CI/CD Workflow with Jenkins | Jenkins, Docker, Shell, GitHub.

- **Challenge & Approach:** Built a Jenkins pipeline integrated with Docker for containerization and GitHub to automate deployments and reduce manual errors. Added error handling in build/test stages for reliable, repeatable releases.
- **Impact:** Cut deployment time by 50%, reduced manual errors by 70%, enabled rollbacks, and increased deployment frequency from weekly to daily.

Automated AWS EKS & EC2 Infrastructure Provisioning with Terraform | Ansible, Terraform, AWS, GitHub

- **Challenge & Approach:** Used Terraform to provision AWS infrastructure including VPC, subnets, EC2 instances, and an EKS cluster, and applied Ansible to configure EC2 servers for application setup and basic system configuration.
- **Impact:** Made infrastructure setup repeatable and easier to manage, reduced manual configuration, and gained strong hands-on experience with AWS networking, IAM, and EKS in a production-style setup.

EDUCATION

Master of Science in Information Systems | California State University Long Beach | California, USA

August 2023 – May 2025

Relevant Courses: System Analysis & Design, Database Management, Machine Learning. (GPA: 3.5)

Bachelor of Engineering in Information Science | Visvesvaraya Technological University | India

August 2017 – August 2021

Relevant Courses: Data Structures, Algorithms, Computer architecture, Networking, Linux OS. (GPA: 3.7)

SKILLS

Programming Languages: Python, Java, Go, SQL, PowerShell, Shell (Bash), YAML.

Certifications: AWS Certified Cloud Practitioner, HashiCorp Certified Terraform Associate, CKAD.

Frameworks & Technologies: Linux, RHEL, Ubuntu, CentOS, Windows Server, GitHub, Git, Docker, Terraform, Kubernetes, Ansible, Jenkins, Helm, MySQL, Prometheus, GitHub Actions, Argo CD, ITSM, ITIL, CI/CD, Jira, Bitbucket, AWS, EC2, S3, IAM, VPC, EKS, ECS, CloudWatch, Lambda, Azure, Azure DevOps, GCP, VMware, Grafana, Redis, Kafka, ServiceNow, DNS, TCP/IP, Load Balancer, IaaS, Root Cause Analysis, Incident Response.
