Portfolio: nganudeep.github.io/portfolio • Current: JP Nagar 8th Phase, Bengaluru 560108 • Permanent: Hariharapura, Koppa T, Chikkamagaluru 577120

PROFESSIONAL SUMMARY

DevOps and Site Reliability Engineer with 3 years of full-time experience in enterprise fintech, plus hands-on AWS volunteer work with an NGO on the side. Comfortable being the first responder when something breaks, with a solid track record in Linux troubleshooting, incident response, and root-cause analysis, backed by hands-on infrastructure automation using Terraform, Ansible, and Jenkins. Keeps a close eye on system health day to day with Prometheus, Grafana, and CloudWatch, and has picked up container security scanning and GitOps workflows along the way. Maintained 99.9% uptime across 200+ servers at FIS. Certified AWS Cloud Practitioner, Terraform Associate, and CKAD. Fluent in English, Hindi, and Kannada.

EXPERIENCE

Software Engineer, DevOps — FIS, Bengaluru, India

Jun 2021 – Jul 2023

- Built reusable Terraform modules and Ansible playbooks to automate cloud infrastructure provisioning, reducing environment onboarding time by 60% across 25+ client environments.
- Monitored and maintained 200+ RHEL and Windows servers, handling patching, network and firewall configuration, and consistently achieving 99.9% uptime SLA.
- Wrote Bash and Python scripts to automate routine Linux administration tasks, including log rotation, health checks, disk/service monitoring, and patch verification, across the RHEL server fleet, cutting manual troubleshooting time.
- Installed and configured Prometheus node_exporter across on-premises Kubernetes clusters and RHEL servers, and built Grafana dashboards to monitor server health, resource utilization, and service uptime.
- Automated deployment of middleware technologies (Tomcat, IIS, JBoss) and monitoring tools (Zabbix, Smart Cloud) to enforce consistency across all environments.
- Managed Azure and on-premises Red Hat Kubernetes clusters: resolved failed deployments, performed rolling updates, and led root cause analysis on service incidents to identify failure points and reduce recurring downtime.
- Delivered Tier-1/L2 production support across hybrid cloud environments using ServiceNow, handling on-call incidents and meeting SLA timelines.
- Maintained Jenkins CI/CD pipelines integrated with ServiceNow, fixing failed build stages, rotating credentials, and resolving pipeline failures.
- Managed source control via Git (GitHub/Bitbucket) and coordinated releases through Azure DevOps Boards in an Agile/Scrum-based delivery model.
- Participated in Agile/Scrum ceremonies including sprint planning and retrospectives, and led weekend change management windows for patching and maintenance on production RHEL servers to minimize business impact.

Cloud Engineer Volunteer (NGO) — Saayam For All (Remote)

Sep 2025 – Jun 2026

- Provisioned AWS infrastructure (VPC, public/private subnets, S3, EC2, NAT/Internet Gateways, Route Tables) using Terraform for consistent, repeatable environments.
- Configured AWS IAM roles, policies, and security groups with least-privilege access, and deployed CloudWatch dashboards, alarms, and log-based metrics for real-time monitoring, applying the same observability principles used with Prometheus/Grafana in Kubernetes environments.
- Helped build and maintain a multi-branch Jenkins pipeline supporting staging, pre-prod, and production deployments, troubleshooting pipeline failures and configuration issues along the way.
- Handled day-to-day cloud operations including deployment troubleshooting and performance optimization across AWS environments.

PROJECTS

E-Commerce Three-Tier Application on AWS EKS

AWS EKS • Helm • Terraform • ECR • IAM • CloudWatch • ALB Controller • 8 Microservices • 2 Databases

- Designed and deployed a production-grade three-tier e-commerce application on AWS EKS with 8 microservices and 2 database backends.
- Provisioned EKS cluster, node groups, VPC networking, and IAM roles with Terraform; containerized all services and pushed images to Amazon ECR.
- Configured Helm charts per service, set up AWS ALB Ingress Controller for traffic routing, and enabled HPA plus a CloudWatch dashboard for live metrics across all services.

DevSecOps CI/CD & GitOps Pipeline

Jenkins • Docker • Kubernetes • Helm • Argo CD • Trivy • SonarQube • GitHub • AWS

- Built a CI/CD pipeline for two FastAPI microservices using Jenkins, Docker, and automated testing, with commit-SHA-based image versioning.
- Integrated SonarQube for static code analysis and Trivy for container vulnerability scanning, blocking HIGH/CRITICAL issues before deployment.
- Implemented Helm-based Kubernetes deployments and GitOps workflows with Argo CD across development and production environments.

Auto-Scaling Flask App with Kubernetes HPA and Prometheus

Kubernetes HPA • Prometheus • Flask • Minikube • GitHub

- Deployed Flask on Minikube with Kubernetes HPA driven by Prometheus metrics to handle traffic spikes without manual scaling.
- Improved application responsiveness by 2x and boosted resource utilization by 40% during load surges.

Automated CI/CD Workflow with Jenkins

Jenkins • Docker • GitHub • Shell

- Built an end-to-end Jenkins pipeline with Docker containerization and GitHub integration, eliminating manual deployment steps.
- Reduced deployment time by 50%, cut manual errors by 70%, and increased release frequency from weekly to daily with rollback support.

AWS EKS and EC2 Infrastructure Provisioning with Terraform and Ansible

Terraform • Ansible • AWS VPC • EKS • IAM • EC2 • GitHub

- Provisioned full AWS infrastructure (VPC, subnets, EC2, EKS cluster) with Terraform and used Ansible to configure EC2 servers for application setup.
- Made infrastructure fully version-controlled and repeatable, significantly reducing manual setup effort.

EDUCATION

Master of Science in Information Systems — CSULB, USA

Aug 2023 – May 2025

GPA: 3.5 • Courses: System Analysis and Design, Database Management, Machine Learning

Bachelor of Engineering in Information Science — VTU, India

Aug 2017 – Aug 2021

GPA: 3.7 • Courses: Data Structures, Algorithms, Computer Architecture, Networking, Linux OS

CERTIFICATIONS

AWS Certified Cloud Practitioner • HashiCorp Certified: Terraform Associate • Certified Kubernetes Application Developer (CKAD)

TECHNICAL SKILLS

Cloud: AWS (EC2, S3, VPC, IAM, EKS, ECS, Lambda, CloudWatch, RDS, ECR) | Azure | GCP

DevOps and Automation: Terraform, Ansible, Jenkins, GitHub Actions, Argo CD, Helm, Docker, Kubernetes

Operating Systems: RHEL, Ubuntu, CentOS, Windows Server

Programming: Python, Bash/Shell, YAML, PowerShell, Go, Java, SQL

Build Tools: Maven

Monitoring and Observability: Prometheus, Grafana, Zabbix, CloudWatch

Security: Trivy (container vulnerability scanning), SonarQube (static code analysis), IAM least-privilege access, security groups

ML / Data (Working Knowledge): TensorFlow, Keras, scikit-learn basics; coursework in Machine Learning (MS Information Systems)

Streaming/Messaging (Conceptual): Kafka (core concepts: topics, producers/consumers)

Version Control and CI/CD: Git, GitHub, Bitbucket, Azure DevOps, Jenkins

ITSM: ServiceNow, Jira, ITIL, Agile/Scrum

Networking: TCP/IP, DNS, Load Balancers, Firewalls, VPN, NAT Gateways

Languages: English (Fluent) | Hindi (Fluent) | Kannada (Native)

HOBBIES & INTERESTS

Badminton, and FIFA on PS5/PC. I like traveling as a traveller rather than a tourist: slower trips, local food, and figuring out a place instead of just checking it off. Also curious about the origin and nature of the universe, the why, how, and what behind it all.
